

Sobol Grigorii

Engineer / Programmer — Senior Software Engineer

Male, 30 years, born on 5 January 1996

- **Phone:** +7 (985) 112-73-91 · Serbia: +381 63 894 8987
 - **Email:** grishasobolo@gmail.com (*preferred means of communication*)
 - **GitHub:** <https://github.com/grishasobol>
 - **LinkedIn:** <https://www.linkedin.com/in/gsobol/>
 - **Location:** Moscow · Citizenship: Russia · Work permit: Russia
 - Ready to relocate, ready for business trips
-

Desired position and salary

- **Position:** Engineer / programmer
 - **Specialization:** Programmer, developer
 - **Employment type:** Full time
 - **Work format:** At the employer's location
 - **Desired travel time to work:** Less than an hour
 - **Salary:** 12 000 € in hand
-

Work experience — 10 years 10 months

Senior Software Engineer — Gear Tech INC

September 2021 — present (4 years 9 months) USA, gear-tech.io

Rust engineer; blockchain networks development; Vara.eth project team leader since 01/01/2026.

Lead Software Engineer — Huawei Technologies

August 2019 — September 2021 (2 years 2 months) Moscow, www.huawei.com — Telecommunications, Communications · Mobile Communications

1. Work with a Linux-based universal binary translator: create new optimizations, increase target code performance, increase translator stability.
2. Work with binary translator environments: create performance testing scripts, etc.

Engineer / Programmer — NVIDIA Ltd. (Russian Branch)

August 2018 — August 2019 (1 year 1 month) Moscow, www.nvidia.ru — IT, System Integration, Internet · Software Development

Development and implementation of a new phase for a binary translator.

Senior Software Engineer — Moscow Institute of Physics and Technology

January 2018 — July 2018 (7 months) Dolgoprudny (Moscow region) — IT, System Integration, Internet · Software Development · System Integration, Technological and Business Processes Automation, IT Consulting

Laboratory of complex organizational and technological systems.

- Main task: development of a digital signal processor simulator (C++).
- Script development for testing (Python 3, Bash).
- Build system development (CMake).

Junior Software Engineer — Moscow Institute of Physics and Technology

September 2016 — December 2017 (1 year 4 months) Moscow — Educational Institutions · Higher Education Institution

Laboratory of complex organizational and technological systems.

- Main task: development of a back-end compiler based on LLVM for a digital signal processor (C++).
- Development of scripts for testing and wrapper software to launch programs on target platforms (Python 2 and Python 3, Bash).

Trainee Programmer — Intel Corporation

August 2015 — August 2016 (1 year 1 month) Moscow, www.intel.ru/jobs — IT, System Integration, Internet · Software Development

- System Administration (Bash, Python).
 - Development in compiler team (Intel Compiler support) (C++).
-

Education

Master — 2019 Moscow Institute of Physics and Technology (State University), Moscow FRKT, Applied Mathematics and Physics

Master / Bachelor — 2016 Moscow Institute of Physics and Technology (State University), Moscow FRTK, Applied Mathematics and Physics

Skills

Languages

- Russian — Native
- English — B2, Upper Intermediate

Technical skills

Python · C/C++ · Linux · Git · Bash · Assembler · LLVM · Compilers · Binary Translator · ARM · GDB · Blockchain · Rust · Web3 · Solidity · Ethereum · GitHub · Claude Code · Codex · WASM · ZK · Cryptography

Other

Project management · Leadership skills

Driving experience

Driver's license category B.

About me

I work on performance-critical systems at the intersection of compilers, distributed runtimes, and cryptography.

Started in low-level toolchains — compiler support at Intel, an LLVM back-end and DSP simulator at MIPT's research lab, internal binary translators at NVIDIA, and a Linux-based universal binary translator at Huawei (Senior SWE / Team Lead). Mostly C and C++, with Python and Bash for the infrastructure around them.

Since September 2021 at Gear Technologies, fully on Rust. Core developer of the Vara Network L1, then architect of Vara.eth — an Ethereum-anchored rollup with its own block-producer, announces protocol, signer, and BFT consensus on Malachite. Tech Lead of Vara.eth since January 2026. The work is roughly: WebAssembly sandboxing and JIT internals (Wasmer, Wasmi, dlmalloc), Substrate-style runtimes, secp256k1 / FROST / DLEQ cryptography, and a lot of design docs and code review.

What I'm good at: owning a subsystem end-to-end — from the RFC to the merged PR — and keeping it correct, fast, and debuggable. What I want to do next: bring this stack into AI infrastructure — agent runtimes on WASM, inference and training pipelines, verifiable compute. Open to remote and to relocation in EU / UK / US.

Off-hours: piano, sport, travel.
